The Scented Garden

How plants grow

Plants can be planted, can be added to improve the soil and new seeds or more space and make the garden look better. Composting, removing litter and weeds will give plants to take care of the environment can help plants to grow. The cycle of a plant is:

1. **Seeds** - these are dispersed by wind, water or animals.
2. **Roots** - these absorb water and nutrients from the soil and anchor the plant to the ground.
3. **Stem** - supports the plant and allows water and nutrients to be transported to the leaves.
4. **Leaves** - photosynthesis occurs here, converting sunlight and water into food for the plant.
5. **Flower** - pollination occurs, leading to fruit and seeds.
6. **Fruit** - contains seeds, which can be dispersed by wind, water or animals.
7. **Seeds** - these are dispersed by wind, water or animals again.

Common Plants

- **Poppies**
- **Daffodils**
- **Roses**

There are many different plants found all over the United Kingdom. They give us oxygen to breathe and food to eat. A plant is a living thing, Plants are useful because...
Plant adaptations

Glossary

Supports the plant

Flower

Supports the plant by growing towards light. It develops into a seed after pollination.

Flower is where seeds are produced. A seed is a small growth on a plant that can live in soil or water. When a seed grows, it can develop into a seedling.

Stem

The part of a plant that grows up from the ground and reaches for light. The part of a plant that grows up from the ground and reaches for light.

Shoot

The part of a plant that grows up from the ground and reaches for light.

Seed

The part of a plant that grows up from the ground and reaches for light.

Pitcher Plants

Some plants can harm fungi if they are touched.

Harmful Plants

Some plants can cause problems with the skin.

Useful Plants

Some plants can cause problems with the skin.
